SCHS122N - NOVEMBER 1997 - REVISED APRIL 2024

# CDx4HC405x, CD4HCT405x High-Speed CMOS Logic Analog **Multiplexer and Demultiplexer**

### 1 Features

- Qualified for automotive applications
- Wide analog input voltage range: ±5V maximum
- Low ON-resistance:
  - 70 $\Omega$  typical (V<sub>CC</sub> V<sub>EE</sub> = 4.5V)
  - 40Ω typical (V<sub>CC</sub> V<sub>EE</sub> = 9V)
- Low crosstalk between switches
- Fast switching and propagation speeds
- Break-before-make switching
- Wide operating temperature range: -40°C to +125°C
- Operation control voltage: 4.5V to 5.5V
- Switch voltage: 0V to 10V
- Direct LSTTL input logic compatibility  $V_{IL} = 0.8V$  maximum,  $V_{IH} = 2V$  minimum
- CMOS input compatibility I<sub>I</sub> ≤ 1μA at V<sub>OI</sub> , V<sub>OH</sub>

# 2 Applications

- Digital radio
- Signal gating
- Factory automation
- **Televisions**
- **Appliances**
- Programmable logic circuits
- Sensors

# 3 Description

The CDx4HC405x and CDx4HCT405x device is a digitally controlled analog switch that uses silicon gate CMOS technology to achieve operating speeds similar to LSTTL with the low-power consumption of standard CMOS integrated circuits.

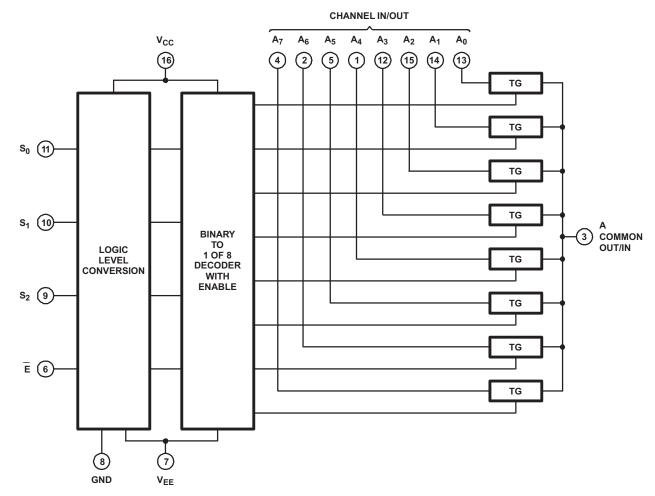

This analog multiplexer and demultiplexer controls analog voltages that may vary across the voltage supply range (for example,  $V_{CC}$  to  $V_{EE}$ ). It is a bidirectional switch that allows any analog input to be used as an output and vice versa. The switch has low ON resistance and low OFF leakages. In addition, this device has an enable control that, when high, disables all switches to their OFF state.

#### **Device Information**

| PART NUMBER | TA             | PACKAGE <sup>(1)</sup> | PACKAGE SIZE(2)  |
|-------------|----------------|------------------------|------------------|
| CD54HCx405x |                | J (CDIP, 16)           | 19.56mm × 6.92mm |
|             |                | N (PDIP, 16)           | 19.30mm × 6.35mm |
| CD74HCx405x | -55°C to 125°C | D (SOIC, 16)           | 9.9mm × 3.9mm    |
| CD74HCX405X |                | NS (SOP, 16)           | 10.3mm × 5.3mm   |
|             |                | PW (TSSOP, 16)         | 5mm × 4.4mm      |

- For more information, see Section 11.
- The package size (length × width) is a nominal value and includes pins, where applicable.

| I <sub>EE</sub>                     | DC V <sub>EE</sub> current              |   | -20  |      | mA   |
| V <sub>SEL</sub> or V <sub>EN</sub> | Logic control input pin voltage (E      | N, Ax, SELx)                                      | -0.5 | 30   | V    |
| T <sub>JMAX</sub>                   | Maximum junction temperature            |   | 150  | °C   |      |
| T <sub>LMAX</sub>                   | Maximum lead temperature Soldering 10 s |   |      | 300  | °C   |
| T <sub>stg</sub>                    | Storage temperature                     | •   | -65  | 150  | °C   |

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Rating may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Condition. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 5.2 ESD Ratings

|                    |                         |  | VALUE | UNIT |
|--------------------|-------------------------|--|-------|------|
| V                  | N/                      | Human body model (HBM), per ANSI/ESDA/<br>JEDEC JS-001, all pins <sup>(1)</sup>          | ±500  | V    |
| V <sub>(ESD)</sub> | Electrostatic discharge | Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup> | ±200  | V    |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

<sup>(2)</sup> All voltages are with respect to ground, unless otherwise specified.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### **5.3 Thermal Information**

<sup>(1)</sup> For maximum reliability, nominal operating conditions must be selected so that operation is always within the ranges specified in the *Recommended Operating Conditions* table.

<sup>(2)</sup> All voltages referenced to GND unless otherwise specified.

<sup>(3)</sup> In certain applications, the external load resistor current may include both V<sub>CC</sub> and signal line components. To avoid drawing V<sub>CC</sub> current when switch current flows into the transmission gate inputs, the voltage drop across the bidirectional switch must not exceed 0.6V (calculated from r<sub>ON</sub> values shown in *Electrical Characteristics HC* and *Electrical Characteristics HCT* tables). No V<sub>CC</sub> current will flow through R<sub>L</sub> if the switch current flows into terminal 3 on the HC and HCT40511; terminals 3 and 13 on the HC and HCT4052; terminals 4, 14, and 15 on the HC and HCT4053.

# 5.5 Electrical Characteristics: HC Devices

Over operating free-air temperature range,  $V_{SUPPLY} = \pm 5V$ , and  $R_L = 100\Omega$ , (unless otherwise noted)

### 7 Detailed Description

### 7.1 Overview

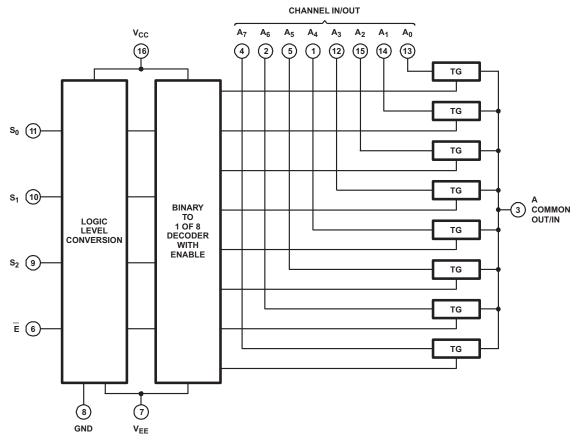

The CDx4HCx4051 devices are a single 8-channel multiplexer having three binary control inputs,  $S_0$ ,  $S_1$ , and  $S_2$  and an  $\overline{\text{ENABLE}}$  input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

The CDx4HCx4052 devices are a differential 4-channel multiplexer having two binary control inputs,  $S_0$  and  $S_1$ , and an  $\overline{\text{ENABLE}}$  input. The two binary input signals select 1 of 4 pairs of channels to be turned on and connect the analog inputs to the outputs.

The CDx4HCx4053 devices are a triple 2-channel multiplexer having three separate digital control inputs,  $S_0$ ,  $S_1$ , and  $S_2$  and an  $\overline{\text{ENABLE}}$  input. Each control input selects one of a pair of channels that are connected in a single-pole, double-throw configuration.

When these devices are used as demultiplexers, the CHANNEL IN/OUT terminals are the outputs and the COMMON OUT/IN terminals are the inputs.

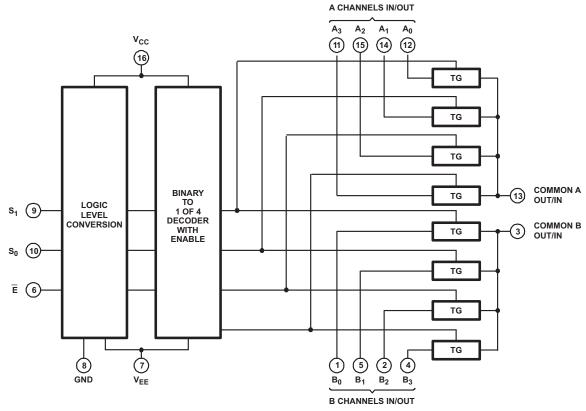

# 7.2 Functional Block Diagrams

All inputs are protected by standard CMOS protection network.

### 7.3 Feature Description

The CDx4HCx405x line of multiplexers and demultiplexers can accept a wide range of analog signal levels from -5 to +5V. They have low ON resistance, typically  $70\Omega$  for  $V_{CC} - V_{EE} = 4.5V$  and  $40\Omega$  for  $V_{C} - V_{EE} = 4.5V$ , which allows for very little signal loss through the switch.

Binary address decoding on chip makes channel selection easy. When channels are changed, a break-before-make system eliminates channel overlap.

# 8 Application and Implementation

#### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

The CDx4HCx405x line of multiplexers and demultiplexers can be used for a wide variety of applications.

### 8.2 Typical Application

One application of the CD74HC4051 device is used in conjunction with a microcontroller to poll a keypad. Figure 8-1 shows the basic schematic for such a polling system. The microcontroller uses the channel-select pins to cycle through the different channels while reading the input to see if a user is pressing any of the keys. This is a very robust setup that allows for simultaneous key presses with very little power consumption. It also uses very few pins on the microcontroller. The down side of polling is that the microcontroller must frequently scan the keys for a press.

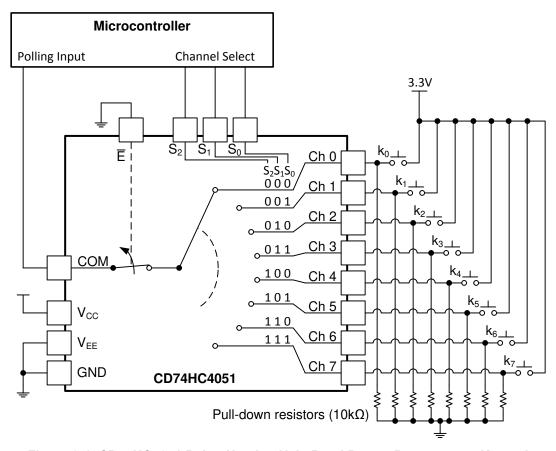

Figure 8-1. CD74HC4051 Being Used to Help Read Button Presses on a Keypad

### 8.2.1 Design Requirements

These devices use CMOS technology and have balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions must be considered to prevent ringing.

See Table 8-1 for the input loading details.

**Table 8-1. HCT Input Loading Table** 

| TYPE       | INPUT | UNIT LOADS(1) |  |  |  |
|------------|-------|---------------|--|--|--|
| 4051, 4053 | All   | 0.5           |  |  |  |
| 4052       | All   | 0.4           |  |  |  |

(1) Unit load is ΔI<sub>CC</sub> limit specified in Section 5, for example, 360mA MAX at 25°C.

### 8.2.2 Detailed Design Procedure

- 1. Recommended input conditions:
  - For switch time specifications, see propagation delay times in Section 5.5.
  - Inputs must not be pushed more than 0.5V above V<sub>DD</sub> or below V<sub>EE</sub>.
  - For input voltage level specifications for control inputs, see V<sub>IH</sub> and V<sub>IL</sub> in Section 5.5.
- 2. Recommended output conditions:
  - Outputs must not be pulled above V<sub>DD</sub> or below V<sub>EE</sub>.
- 3. Input and output current consideration:
  - The CDx4HCx405x series of parts do not have internal current-drive circuitry, and thus cannot sink or source current. Any current will be passed through the device.

### 8.2.3 Application Curve

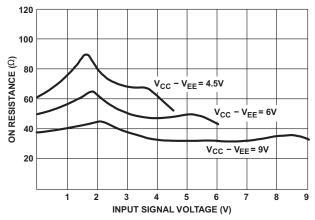

Figure 8-2. Typical ON Resistance vs Input Signal Voltage

### 8.3 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the Section 5.5.

Each  $V_{CC}$  terminal must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a  $0.1\mu F$  bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a  $0.01\mu F$  or  $0.022\mu F$  capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual-supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a  $0.1\mu F$  bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. A  $0.1\mu F$  and a  $1\mu F$  capacitor are commonly used in parallel. For best results, the bypass capacitor or capacitors must be installed as close as possible to the power terminal.

### 8.4 Layout

### 8.4.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change in width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This change in width upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace, thus resulting in the reflection. Not all PCB traces can be straight, so they will have to turn corners. Figure 8-3 shows progressively better techniques of rounding corners. Only the last example (BEST) maintains constant trace width and minimizes reflections.

# 9 Device and Documentation Support

# 9.1 Documentation Support

### 9.1.1 Related Documentation

For related documentation, see the following:

Texas Instruments, Implications of Slow or Floating CMOS Inputs

### 9.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 9.3 Support Resources

TI E2E<sup>™</sup> support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

#### 9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

<sup>(1)</sup> The marketing status values are defined as follows: **ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

www.ti.com 25-Jun-2024

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

SOP

- 1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing
- per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.

SOF

#### NOTES: (continued)

- 5. Publication IPC-7351 may have alternate designs.
- 6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOF

#### NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

# D (R-PDS0-G16)

### PLASTIC SMALL OUTLINE

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AC.

# D (R-PDSO-G16)

### PLASTIC SMALL OUTLINE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
- E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

SMALL OUTLINE PACKAGE

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
- 5. Reference JEDEC registration MO-153.

SMALL OUTLINE PACKAGE

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SMALL OUTLINE PACKAGE

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

### **MECHANICAL DATA**

### NS (R-PDSO-G\*\*)

# 14-PINS SHOWN

#### PLASTIC SMALL-OUTLINE PACKAGE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

#### 14 LEADS SHOWN

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. This package is hermetically sealed with a ceramic lid using glass frit.
- D. Index point is provided on cap for terminal identification only on press ceramic glass frit seal only.
- E. Falls within MIL STD 1835 GDIP1-T14, GDIP1-T16, GDIP1-T18 and GDIP1-T20.

# N (R-PDIP-T\*\*)

### PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
- The 20 pin end lead shoulder width is a vendor option, either half or full width.
